Summary

Software Engineer with 2+ years of production experience in **Generative AI, LLM Orchestration, and Agentic AI** - deployed in live US HealthTech enterprise environments. At MediCodio, led the AI Platform team that took medical code prediction accuracy from **60% to 95–97%** on ICD/CPT codes, while cutting inference costs by **75%** and execution time by **50%**. Built and iteratively rebuilt the full PERN stack application platform across multiple production versions. Targeting roles where AI and product engineering overlap.

Technical Skills

AI & LLM: LLM Orchestration, Agentic AI, Prompt Engineering, LangChain, OpenAI API, Model Context Protocol (MCP), HuggingFace, Generative AI (GenAI)

Vector & Data: Pinecone (Vector DB), PostgreSQL, MongoDB, MySQL, NumPy, Pandas, Scikit-learn

Full Stack: React.js, Node.js, Express.js, PERN Stack, REST APIs, HTML/CSS, Tailwind CSS, Bootstrap

Automation & Domain: RPA, EMR Integration, Healthcare IT, N8N, AI Cost Optimisation

Tools: Git/GitHub, Postman, Azure, Cursor, Jupyter Notebook, VS Code

Languages: JavaScript, Python, SQL, C++

Experience

MediCodio Inc. - US HealthTech, AI-powered medical coding platform

Nov 2025 – Present

Software Engineer, Module Lead - AI Platform & Application

Bengaluru, Karnataka

- Own the AI platform end-to-end - LLM orchestration, prompt architecture, Pinecone vector search, and ICD/CPT-focused agentic workflows. Prediction accuracy now sits at **95–97%** across multiple specialties.
- Drove architectural rewrites on the inference pipeline that simultaneously improved accuracy, cut **AI costs by 75%**, and reduced **execution time by 50%** - each iteration informed by production data from live client usage.
- Designed the EMR automation system that eliminated **~90% of manual chart operations**: fault-tolerant pipelines handling multiple live EMR systems in parallel, with retry logic, denial detection, risk scoring, and specialty-based routing.
- Lead the AI Platform & Application teams - set technical direction, own the roadmap, and resolve high-priority production issues before they reach clients.
- Primary technical contact for US enterprise healthcare clients - requirement gathering, integration design, and production deployment alignment across multiple accounts.

MediCodio Inc.

Jul 2024 – Oct 2025

Software Development Engineer - AI Platform & Full Stack

Bengaluru, Karnataka

- Built MediCodio's application platform through multiple versions from scratch - each rebuild on the PERN stack driven by product evolution and scale requirements, with full ownership of frontend, backend, and database.
- Improved application performance by **40%** through REST API redesign, PostgreSQL index restructuring, and React state-management overhaul.
- Developed the core product surfaces used daily by US healthcare clients: coder dashboards, chart review interfaces, queue management, and workflow orchestration - all wired to the live AI prediction engine.
- Built and deployed integrations across **multiple simultaneous live EMR systems** using API and RPA-based automations, covering the full chart lifecycle: import → validation → prediction → review → audit → export.

- Built React UI modules and REST API integrations on an enterprise-scale MERN codebase; shipped features across weekly agile sprints.

Projects

Codio - AI Medical Code Prediction Engine | *LLMs, LangChain, OpenAI API, Pinecone, Node.js, PostgreSQL*

- Designed specialty-aware agentic workflows for end-to-end ICD/CPT code generation - chart ingestion, clinical data enrichment, multi-step LLM reasoning chains, and confidence-based output validation.
- Engineered the inference stack: Pinecone vector search with custom embedding strategies, batching pipelines, intelligent fallback model routing, and prompt caching - built to scale across high chart volumes with consistent accuracy.

MediCodio Application Platform | *React.js, Node.js, Express.js, PostgreSQL, RPA*

- Architected a multi-version PERN stack platform - modular REST API design, normalised PostgreSQL schema with optimised indexing, and a React frontend with centralised state management across complex workflow surfaces.
- Built core product surfaces: role-based coder dashboards, chart review interfaces with audit trail support, priority queue management, and real-time AI prediction integration with status tracking and lifecycle management.

EMR Integration & Chart Automation System | *RPA, API Integrations, Node.js, Workflow Automation*

- Built a fault-tolerant automation layer connecting multiple simultaneous live EMR systems - API and RPA-based chart ingestion, mandatory-field validation, specialty-based routing, denial detection, and risk scoring with full compliance logging.

Education

Indian Institute of Information Technology (IIIT), Dharwad
B.Tech, Computer Science & Engineering · CPI: 8.54

Dec 2020 – May 2024
Dharwad, Karnataka

Certifications & Achievements

- **Anthropic Certified: Building with the Claude API** - Apr 2026 [[Certificate](#)]
- **Anthropic Certified: Model Context Protocol (MCP)** - Apr 2026 [[Certificate](#)]
- Solved **600+ DSA problems** across LeetCode, Coding Ninjas, and GFG. [[Profile](#)]
- **ReactJS Basic to Advanced** - Udemy, Jan 2024. [[Certificate](#)]
