

APP LAUNCH

Orbit CRM

A collaborative sales platform for remote teams. Streamlined user flows focusing on asynchronous communication and data visualization.

CLIENT	TECHCORP SOLUTIONS
ROLE	LEAD UX/UI DESIGNER
YEAR	2025
STACK	FIGMA, REACT
DURATION	6 MONTHS

TechFlow Solutions, a rapidly growing mid-sized SaaS provider, was struggling with fragmented customer data and inefficient sales pipelines. By implementing **Orbit CRM**, they unified their sales and support teams, automated key follow-up processes, and achieved a **35% increase in lead close rates** within the first quarter.

The Client

TechFlow Solutions provides cloud-based inventory management for e-commerce businesses.

- **Industry:** SaaS / Tech
- **Team Size:** 45 employees (12 Sales, 8 Support)
- **Location:** Austin, Texas

The Challenge: Growing Pains and Siloed Data

As TechFlow scaled from a startup to a mid-sized operation, their manual processes began to break down. Their "CRM" consisted of a patchwork of spreadsheets, email threads, and sticky notes.

Key Pain Points:

- **Data Silos:** The marketing team didn't know which leads sales were working on, and support had no visibility into a customer's sales history.
- **Lead Leakage:** 20% of inbound leads were falling through the cracks due to slow response times.
- **Lack of Insights:** Management had no real-time dashboard to forecast revenue or track individual rep

performance.

"We were growing fast, but our systems were stuck in day one. We were losing deals simply because we couldn't find the right phone number or forgot to follow up." — Sarah Jenkins, VP of Sales at TechFlow

The Solution: Orbit CRM Integration

TechFlow chose Orbit CRM for its intuitive interface and robust automation capabilities. The implementation focused on three core areas:

1. Centralized Customer Truth Orbit CRM became the single source of truth. Every email, call, and support ticket was logged automatically against the customer profile. Now, if a salesperson called a lead, they could see if that lead had an open support ticket, preventing awkward sales pitches during technical issues.

2. Automated Sales Pipelines We set up a custom "Deal Flow" in Orbit.

- **Trigger:** When a lead fills out a web form.
- **Action:** Orbit automatically assigns the lead to a rep based on territory and creates a "To-Do" task for a follow-up call.
- **Nurture:** If a lead stays in the "Consideration" stage for more than 3 days, Orbit sends a personalized check-in email.

3. Actionable Analytics Custom dashboards were created to track KPIs like *Time to First Contact*, *Conversion Rate by Source*, and *Monthly Recurring Revenue (MRR)*.

The Results

After a 3-week onboarding period, the impact was immediate.

- **35% Increase in Close Rate:** With organized data and timely reminders, reps stopped missing opportunities.
- **15 Hours Saved Per Week:** Automation handled data entry and basic follow-ups, freeing up the sales team to focus on selling.
- **100% Data Visibility:** Management can now see the health of the pipeline in real-time, allowing for more accurate quarterly forecasting.

Conclusion

By moving from spreadsheets to **Orbit CRM**, TechFlow Solutions didn't just organize their data—they transformed their business culture. The sales team is now proactive rather than reactive, and the support team has the context they need to provide world-class service.
