About

Most AI systems fail not because models are weak—but because orchestration is broken.

I work at the intersection of AI engineering, automation, and product velocity, designing agentic, production-grade AI systems that move from prototype to scale—fast, reliable, and cost-efficient.

The Challenge

Healthcare AI demands extreme accuracy, compliance, and scale—while operating under cost pressure and messy data.

The Action

I architect AI-first platforms using agentic workflows, LLM orchestration, vector intelligence, and RPA automation, combining deep backend systems with product-level execution. I lead teams, design technical roadmaps, and ship systems that humans actually trust and use.

The Outcome

95%+ AI prediction accuracy
50% faster execution via workflow and vector-search optimization
75% cost reduction through intelligent model routing, caching, and inference strategy
90% manual effort eliminated via end-to-end automation
Products delivered in days—not quarters

I don't just build AI—

I engineer velocity, collapse cost, and convert AI into real leverage.

TECH STACK & SPECIALTIES

AI Orchestration & Agentic Workflows (LLMs, multi-agent systems)
Generative AI Systems Design (Prompt Engineering, fallback models)
Vector Intelligence (Pinecone, semantic retrieval)
Human-AI Collaboration Systems
Automation RPA-Driven Pipelines
PERN Stack (React, Node.js, Express, PostgreSQL)
Scalable Backend Architecture
Technical Roadmap Strategy Team Leadership

Experience

MediCodio Inc.

Full-time · 1 yr 11 mos

Bengaluru, Karnataka, India · On-site

MediCodio | Software Engineer – Module Lead (AI Platform & Application)

Nov 2025 - Present · 7 mos

Challenge:

Scale a healthcare AI platform requiring near-human accuracy, enterprise reliability, and aggressive cost control.

Action:

Architected the core AI prediction engine using LLM orchestration and agentic workflows
Designed specialty-aware, modular AI pipelines with fault-tolerant edge-case handling
Optimized vector search, batching, caching, and intelligent model routing
Led AI Platform & Application teams, aligning system reliability with delivery velocity
Owned technical roadmap strategy and acted as client-facing technical lead for US enterprises

Outcome:

95%+ prediction accuracy across multiple specialties
50% reduction in execution time
75% operational cost savings
40% performance improvement across platform APIs and UI
90% reduction in manual chart operations
Deployment cycles cut from weeks to days

Skills: AI Orchestration, Agentic AI Workflows, Generative AI Systems, LLM Optimization, Prompt Engineering, Vector Databases (Pinecone), Semantic Retrieval, AI Cost Optimization, Scalable AI Architecture

♥ Leading Development Teams, Technical Design and +13 skills

Software Development Engineer (AI Platform / Full Stack)

Jul 2024 - Jan 2026 · 1 yr 7 mos

Challenge

Build the foundation for a scalable, automation-first AI product from scratch.

Action

Built the entire AI-powered SaaS platform using the PERN stack, owning frontend, backend, and database layers
Developed secure REST APIs, chart pipelines, dashboards, and audit workflows
Integrated AI engine endpoints for prediction, review, audit, and lifecycle management
Designed EMR API + RPA integrations for real-world healthcare workflows

Outcome

40% performance improvement across APIs and UI
90% reduction in manual chart operations
Established the platform architecture later scaled across the company

Skills: Full-Stack Engineering, PERN Stack, Scalable SaaS Architecture, API Design, Automation-First Systems, Performance Optimization, AI Platform Integration, Technical Ownership

♥ React.js, React Hooks and +18 skills

Full-stack Intern

techolution · Internship

Sep 2023 - Oct 2023 · 2 mos

Hyderabad, Telangana, India · Remote

- Focused on React, making application layout changes, and implementing additional features according to client requirements.
- Dealt with API integration to fetch and display data, enhancing the website's layout and functionality.
- Collaborated with the development team to ensure robustness and scalability of industrial-level projects, including working with large codebases.

I was fortunate to dive deep into various aspects of full-stack development, primarily focusing on the MERN (MongoDB, Express.js, React.js, Node.js) stack. Over the course of these months, I engaged in a multitude of projects and tasks that allowed me to strengthen my skills and understanding of modern web development. One of the key projects I undertook involved developing responsive and dynamic user interfaces using React.js. I was involved in crafting intuitive user experiences by leveraging React components effectively, optimizing performance, and ensuring seamless interactions. Additionally, I gained valuable experience in backend

development with Node.js and Express.js, where I contributed to building robust APIs to support the frontend functionality.

Furthermore, I actively participated in collaborative team projects where I not only implemented features but also engaged in code reviews, debugging sessions, and brainstorming discussions. This collaborative environment not only honed my technical abilities but also enhanced my communication and teamwork skills. Overall, my internship experience at Techolution was incredibly enriching, allowing me to apply theoretical knowledge into practical scenarios, tackle real-world challenges, and foster a deeper passion for full-stack development. I'm eager to bring this wealth of experience and enthusiasm to contribute effectively to your company."

♥ Data structure and Algorithm , Bootstrap (Framework) and +11 skills

Software Engineer Intern

TalentServe · Internship
Jun 2023 - Aug 2023 · 3 mos
Mumbai, Maharashtra, India · Remote

Collaborated on the development of a dynamic educational platform powered by the MERN stack. Employed advanced MongoDB querying techniques and Express.js optimizations to refine backend operations. Engaged in agile rituals to drive project momentum, delivering high-quality features on schedule.
